

ALL TUNAS 2028

**All Tunas 2028** gives seafood retailers, wholesalers, distributors, and other market representatives a voice to directly advocate for the protection of tuna fisheries through the adoption of the 13 remaining harvest strategies for the most commercially valuable tuna stocks by the end of 2028.

**Regional fisheries management organizations (RFMOs) are international bodies that govern some of the world's most valuable fisheries.**

Their decisions directly affect the sustainability and reliability of global seafood supply chains. Yet RFMO meetings rarely include the seafood markets at the consumer-facing end of the supply chain.

**Harvest strategies protect tuna fisheries for the long-term.**

By providing stability, predictability, and science-based safeguards, harvest strategies help ensure the future of tuna sourcing. Through a proactive approach to achieving long-term fishery objectives, they can support more sustainable fisheries and stable supply chains. But these tools don't implement themselves; market actors can play a critical role by advocating for their adoption.

**Learn more:**

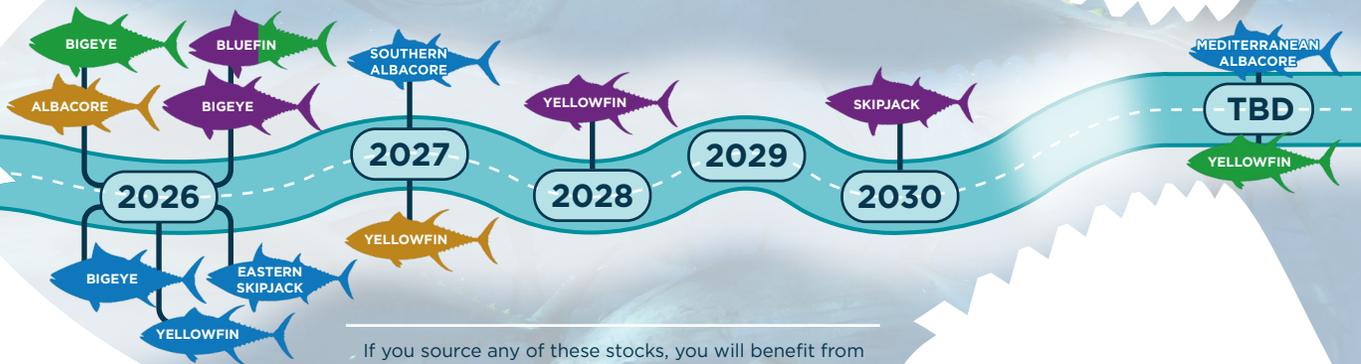

The 13 stocks below have harvest strategies up for adoption in the coming years. 2026 is especially important, with seven harvest strategies up for adoption.

**Indian Ocean**  
Managed by IOTC

**West Pacific Ocean**  
Managed by WCPFC

**East Pacific Ocean**  
Managed by IATTC

**Atlantic Ocean**  
Managed by ICCAT

If you source any of these stocks, you will benefit from the adoption of a harvest strategy. Join All Tunas 2028 to urge RFMOs to adopt all 13.
